

CoventBridge considers security a company-wide commitment and with our SOC 2 Type 2 certification our customers know and trust that we will keep their data safe and secure.

### What is a SOC 2 Type 2 certification?

A SOC 2 Type 2 report is an industry-recognized report that provides reasonable assurance that CoventBridge controls are suitably designed, operating effectively as necessary, and meet the specific criteria around security and availability.

- **SOC 2 (System and Organization Control)** - SOC 2 is a common compliance framework specifically designed for service providers that store customer data in the cloud. It requires companies to establish long-term, ongoing internal practices regarding the security of customer data.
- **Type 2** - Type 2 examine' s the controls' design and operating effectiveness over a specific period.

### What is the benefit to our customers?

Our customers can rest easy knowing that all of our following frameworks have been through rigorous testing and review.

- Control Environment
- Security Policies
- Risk Assessment Process
- Information & Communication Systems
- Monitoring Controls
